"Recycling That Writes a Better Tomorrow – SRC Paper Waste".

Paper waste is a major cause of pollution in landfills around the world. Tonnes of paper are thrown away every day from schools, offices, industries and homes. If not recycled, it causes deforestation, water wastage and increased carbon emissions. SRC Paper Waste offers specialized waste paper procurement, collection and recycling services, turning waste paper into reusable resources. Our processes are designed to promote environmental standards and a circular economy.

Growing need for paper recycling

The demand for paper in the world is increasing every year, increasing pressure on forests and natural resources.The paper recycling industry plays a crucial role in protecting natural resources and reducing environmental pollution.

Reduces tree felling.

Saves water and energy used in making paper.

Reduces greenhouse gas emissions.

Reduces waste going to landfills.

According to statistics, recycling 1 ton of paper saves approximately 17 trees, 7,000 gallons of water, 3 cubic yards of landfill space and about 4,000 kilowatt-hours of electricity.

SRC Paper Waste Recycling Process

1.Our paper recycling process ensures maximum efficiency and high quality:

2.Waste Paper Collection – Collecting waste paper in bulk from schools, colleges, printing presses, packaging units and corporate offices.

3.Sorting – Separating paper as per type and quality, such as cardboard, office paper, newspaper, mixed paper.

4.Shredding & Pulping – Cutting paper into small pieces and mixing it with water to prepare pulp.

5.De-Inking & Cleaning – Removing ink, glue and other impurities.

6.Re-Manufacturing – Making new paper and recycled paper products from clean pulp.

What type of paper waste do we recycle

- Old Corrugated Cardboard (OCC) – Used cardboard boxes and other packaging materials
- Office Waste Paper (OWP) – Photocopy paper, printer waste, shredded documents.
- Newspapers and Magazines – Newspapers, journals, catalogues.
- Mixed Paper Waste (MWP) – Mixed paper from households and businesses.

Benefits of recycling with SRC Paper Waste

- Resource conservation – Lowers the demand for newly produced wood pulp.
- Reduction in carbon footprint – Less pollution compared to virgin paper production.
- Cost savings – Reduced raw material costs.
- Sustainable production – Meeting the demand for eco-friendly products.

- Employment opportunities – Creating jobs in collection, sorting and processing sectors.

Why choose SRC Paper Waste?

Buy waste paper in bulk – From schools, colleges, industries and corporates.

Environment-compliant processes – As per government regulations and eco-friendly standards.

Fast and reliable service – timely collection and processing of waste.

Nationwide network – large scale recycling operations.

Contribution to a better tomorrow

"Recycling that writes a better tomorrow" means – every recycled paper reduces the need for new paper production, thereby saving forests and reducing pollution. By associating with SRC Paper Waste, institutions and individuals become part of a sustainable system that benefits both the environment and the economy.

Conclusion

Paper recycling is no longer an option but an imperative for sustainable development. SRC Paper Waste provides large scale professional waste paper recycling services that save resources, protect the environment and provide long term ecological benefits. Embracing recycling today ensures a clean and green future for generations to come.
